SUMMARY

Early-career full-stack developer building practical AI-enabled tools that help people learn, make safer decisions, and retain ownership. Combines React/TypeScript development, evaluation, deployment, and plain-language documentation with a student-centered mentoring approach: AI can structure evidence and suggest next steps, while people keep judgment and control.

TECHNICAL SKILLS

Languages & Web: TypeScript, JavaScript, React, Node.js, HTML/CSS, Python, SQL, C#, Rust

Product & AI Development: Full-stack applications, REST APIs, accessible interface design, model-provider integration, prompt/output evaluation, deterministic evaluation, testing

Delivery & Enablement: Git/GitHub, Vite, Vercel, Caddy, Tailscale, systemd, technical documentation, runbooks, nontechnical user guidance

SELECTED PROJECT

BotMentor — Creator & Full-Stack Developer

2026

botmentor.vercel.app · github.com/hbohlen/botmentor

- Built and deployed an early-stage mentoring prototype that helps K–12 robotics students turn incomplete reports into structured observations, possible explanations, safe tests, and a clearer next decision.
- Developed an accessible React/TypeScript workspace with a six-system robot map, guided intake, inspectable hypotheses, cited learning resources, local investigation records, and privacy-preserving mentor handoffs.
- Made responsible-AI boundaries visible: the tool does not diagnose or repair hardware; it surfaces uncertainty and alternatives, uses verify-first guidance, and escalates unsafe or low-confidence situations to a human mentor.
- Created a keyless deterministic evaluation suite for mentoring quality, safety, references, privacy, and evidence isolation; deployed on Vercel with technical and plain-language operating guides for future ownership.

COMMUNITY EXPERIENCE

Nebraska Robotics Expo — Volunteer Robotics Mentor

2017–2018

Omaha, Nebraska

- Supported middle- and high-school robotics teams alongside University of Nebraska at Omaha engineering student volunteers during time-constrained competition events.
- Helped students move from “the robot does not work” to observable evidence, testable hypotheses, and safe troubleshooting steps—preserving their ownership of the learning process.
- This mentoring experience informed BotMentor’s human-in-the-loop approach and the next-step validation plan with nonprofit or volunteer partners.

EDUCATION

Metropolitan Community College — Omaha, Nebraska

2023–2025

Associate of Applied Science

Coursework: React, full-stack application development, JavaScript, database design, C#, interface design, and network and information security.

University of Nebraska at Omaha — Omaha, Nebraska

2015–2022

Coursework in Computer Science and Computer Engineering

Coursework included data structures, computer architecture, communication networks, digital systems, and game programming.

CERTIFICATIONS

Web Development Certificate, Metropolitan Community College — November 2024

Anthropic Education (July 2026): AI Fluency: Framework & Foundations · Claude 101 · AI Fluency for Nonprofits

ADDITIONAL INFORMATION

Work Authorization: Authorized to work in the U.S. · Open to relocation · Available to start as soon as possible
