SUMMARY

Early-career software developer who builds practical, end-to-end AI tools and makes complex technology usable by nontechnical people. Experienced in full-stack development, evaluation, deployment, and documentation, with a student-centered approach shaped by K-12 robotics mentoring. Prioritizes safe experimentation, visible uncertainty, human judgment, and sustainable handoff.

TECHNICAL SKILLS

Languages & Web: JavaScript, TypeScript, React, Node.js, HTML/CSS, Python, SQL, C#, Rust

Development: Full-stack applications, REST APIs, interface design, model-provider integration, testing, deterministic evaluation, production debugging

Tools & Enablement: Git/GitHub, Vite, Vercel, Caddy, Tailscale, systemd, technical documentation, runbooks, nontechnical user guidance

PROJECT

BotMentor — Creator & Full-Stack Developer

2026

botmentor.vercel.app · github.com/hbohlen/botmentor

- Designed and shipped a mentoring co-pilot that helps K-12 robotics students turn incomplete problem reports into structured observations, ranked hypotheses, safe tests, and clear next decisions.
- Built an accessible React/TypeScript workspace with a six-system robot map, guided intake, evidence-aware hypotheses, cited learning resources, local investigation records, and privacy-preserving mentor handoffs.
- Encoded responsible-AI boundaries through visible uncertainty, alternative explanations, verify-first guidance, student-owned testing, and deterministic escalation for unsafe or low-confidence situations.
- Created a keyless evaluation suite with **44 passing checks across 11 scenarios**, covering mentoring quality, safety, references, privacy, and evidence isolation.
- Deployed on Vercel and wrote technical and plain-language operating guides so teachers, mentors, and future maintainers can understand and own the system.

COMMUNITY EXPERIENCE

Nebraska Robotics Expo — Volunteer Robotics Mentor

2017–2018

Omaha, Nebraska

- Supported middle- and high-school robotics teams alongside University of Nebraska at Omaha engineering students in a time-constrained event environment.
- Helped students translate “the robot does not work” into observations, hypotheses, safe troubleshooting steps, and evidence-based decisions while preserving student ownership.
- Translated this mentoring experience into BotMentor’s human-in-the-loop, safety-conscious approach to AI-supported learning.

EDUCATION

Metropolitan Community College — Omaha, Nebraska

2023–2025

Associate of Applied Science; Web Development Certificate (certificate awarded November 2024)

Coursework: React, full-stack application development, JavaScript, database design, C#, interface design, and network and information security.

University of Nebraska at Omaha — Omaha, Nebraska

2015–2022

Coursework in Computer Science and Computer Engineering

ANTHROPIC EDUCATION CERTIFICATIONS

AI Fluency: Framework & Foundations · Claude 101 · AI Fluency for Nonprofits — July 2026
